

How to add figures

How to add figures

1. In your reStructuredText source, add the following directive:

```
.. figure:: figure-file-name.ext
```

```
    Optional caption text.
```

```
    May span multiple lines and even
    paragraphs, as long as it is indented more than the
    ``.. figure::`` directive.
```

2. In the ZWiki? edit box, insert the figure file name in the Upload a file or image field, and click on the Save button.
3. Now edit the page again and remove the:

```
.. image:: figure-file
```

line that ZWiki? has automatically appended to the text. Click on Save and you're done!
