

# CVS and Subversion repository

How to access the EGRID public Subversion repository to get the current and past releases of the EGRID software.

## Browse the repository with a web browser

You can browse the public EGRID Subversion repository by pointing your web browser to the following HTTP URL: <http://egrid-doc.egrid.it/svn>

*Please note* that some parts of the repository contain *private* software so they will result in a 403 Forbidden error response on HTTP access.

## Read-only access with the `svn` command-line client

You can get anonymous access to the EGRID public Subversion repository using the HTTP transport for the Subversion protocol:

```
# list the contents of the whole EGRID repository
svn list http://egrid-doc.egrid.it/srv/svn

# checkout the 'middleware' module in directory 'mdw'
svn checkout http://egrid-doc.egrid.it/srv/svn/middleware mdw
```

For a quick introduction to Subversion command-line client, please see <http://www.abbeyworkshop.com/howto/misc/svn01/> (in English), or <http://egrid-doc.egrid.it/sysadm/svn/intro> (Italian).

*Please note* that some parts of the repository contain *private* software so they will result in a 403 Forbidden error response on HTTP access.
